Beginning C++ Programming
Overloading Operators as Global Functions

In the slide at around 2:20 in this video, the ampersand is used in the wrong place in the parameter declarations.

The correct usage should be:

```
ReturnType operatorOp(const Type &lhs, const Type &rhs);
```

and not,

```
ReturnType operatorOp(const &Type lhs, const &Type rhs);
```

The same is also true for all the examples on this slide.
Thanks to Panos for pointing it out.

At about 4:15 in this video there is a typo in the 3rd Mystring:

The correct usage should be:

```
Mystring operator+(const Mystring &lhs, const Mystring &rhs)
```

and not,

```
Mystring operator+(const Mystring &lhs, const mystring &rhs)
```

Thanks to Tarang for pointing that out.

Best regards,
Frank Mitropoulos
