Beginning C++ Programming
private and public

In the slide at about 3:35 in this video there are typos in the 3rd and 4th statements.
The correct code should use **frank_account**, not **frank** as the variable name and should read:

```
frank_account.deposit(10000000.0);
```

and

```
frank_account.name = "Frank's Account";
```

Thanks to Kriti for pointing that out.
